## **DAND: Wrangle and Analyze Data Project**

**By: Nada Alzahrani**

## INRODUCTION

This Data Project Wrangle and Evaluate is part of Data Analyst Nanodegree from Udacity. The project includes the gathering of information from different sources linked to tweets from the project. User @dog\_rates for Twitter, also known as WeRateDogs.

WeRateDogs rates the photographs of dogs in a humorous way, most frequently offering scores higher than 10/10.

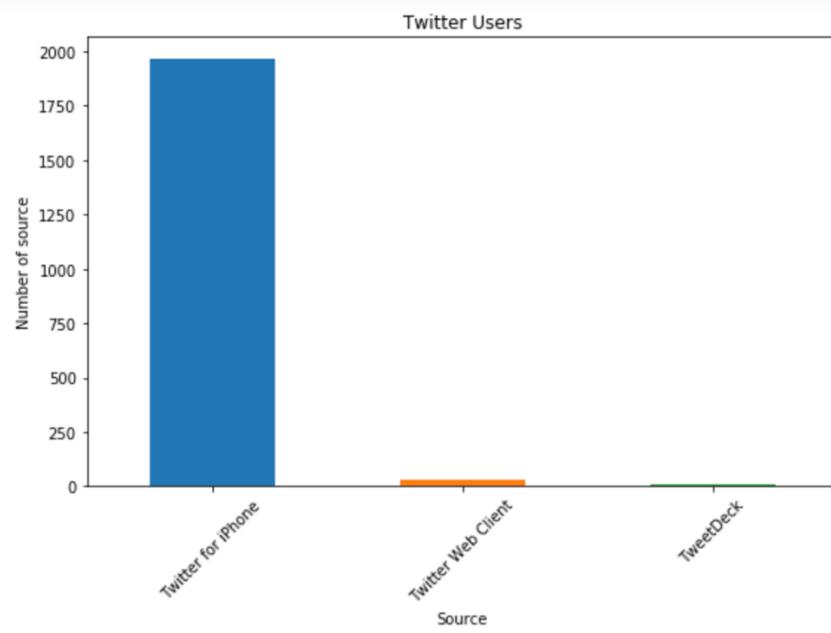

After the data was scraped together the problems of consistency and tidiness were analyzed and then cleaned up. Finally, two visualizations have been developed.

Example tweet on @dog\_rates account:

## POPULAR SOURCE

WeRateDogs use many sources such as iPhone and TweetDeck. therefore, I decided search of the most source. Figure 1 shows the sources, Twitter for iPhone has 1968, Twitter Web Client has 28 and TweetDeck has 11.

**Figure 1:** shows the sources

## Dog Stages

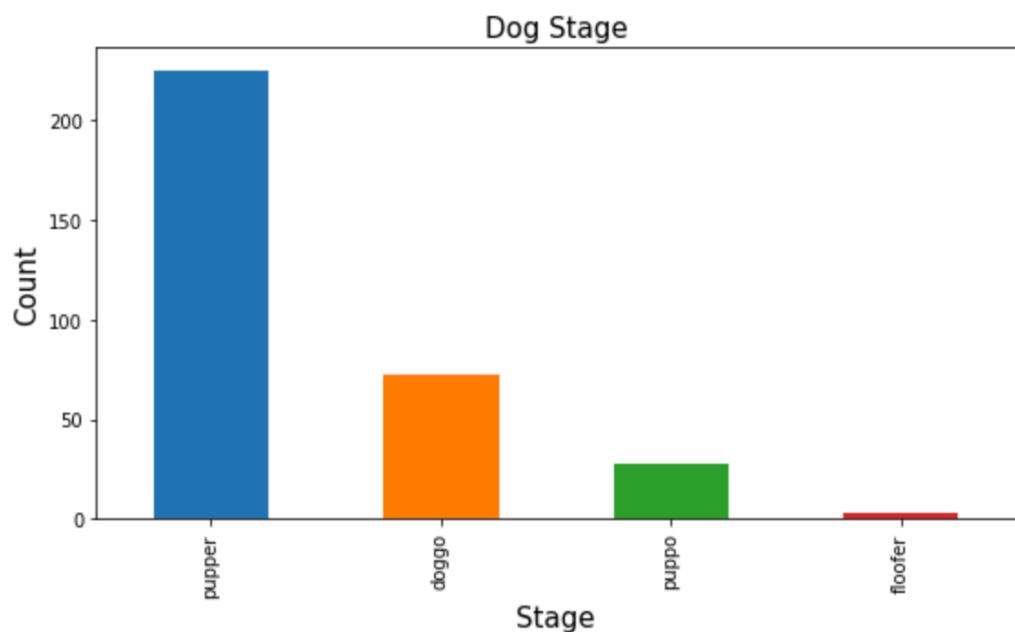

Beginning in the third week the senses of a puppy start to awaken. His eyes and auditory channels open up so that he can communicate for the first time with his brothers and sisters.

He'll make his first walking and barking attempts around the 21st day. He'll have his first encounters inside the comfort of his family circle and get to know the dynamic social actions of his species.

The senses of the puppy are completely established by the fourth week so that he can observe his environment carefully. He'll inspect everything and smell it. His desire to learn is as strong at this point of life as it will ever be. From the fourth week onwards, he will start eating solid food.

There are four stages for dogs which are pupper, doggo, puppo and floofier. Figure 2 shown the higher stage.

**Figure 2 shown the higher stage.**
